

*June 2008*

*It has long been a goal of mine to enhance my practice and our facility in order to continue to provide the finest care possible in a state of the art dental facility. As with all things worthwhile, careful planning was a necessary component to the successful achievement of this goal. I am proud to say that through the collaborative efforts of a number of individuals we have completed our plans. We have created not only a state of the art dental facility but enhanced our care options with the latest in clinical and technological advances designed to make your experience more comfortable and efficient.*

*Included in the planning phase of this project was my desire to remain true to the architecture, essential history and traditions of Medford Village. In addition and through careful planning we have been able to reconstruct and direct our handicap entrance to the new side entrance of the building with new parking in the rear of the building.*

*We look forward to entering the 2009 Dental Office Design Competition with our project that was completed in January 2008. Special thanks to Unthank Design Group, Pagnotta Architects and Cutry Construction for allowing me to achieve my goal.*

*Dr. William Stiles*
